FHIR & The International Patient Summary

HL7 Booth Presentation

Wednesday, April 19, 2023

FHIR

- Fast Healthcare Interoperability Resources (FHIR) is a primary standard of HL7 and designed to enable health data, including clinical and administrative data, to be quickly and efficiently exchanged
- FHIR has been around for 10+ years and is in active use. Its earliest focus has been on making granular data accessible via Application Programming Interface (API)
- FHIR can also exchange clinical documents!

What is the IPS?

The International Patient Summary is a minimal and non-exhaustive set of basic clinical data of a patient, specialty-agnostic, condition-independent, but readily usable by all clinicians for the unscheduled (cross-border) patient care.

- A standardized set of basic clinical data
- Includes most important health and care related facts
- A summarized version of a patient's clinical data provides health professionals the essential information needed for care

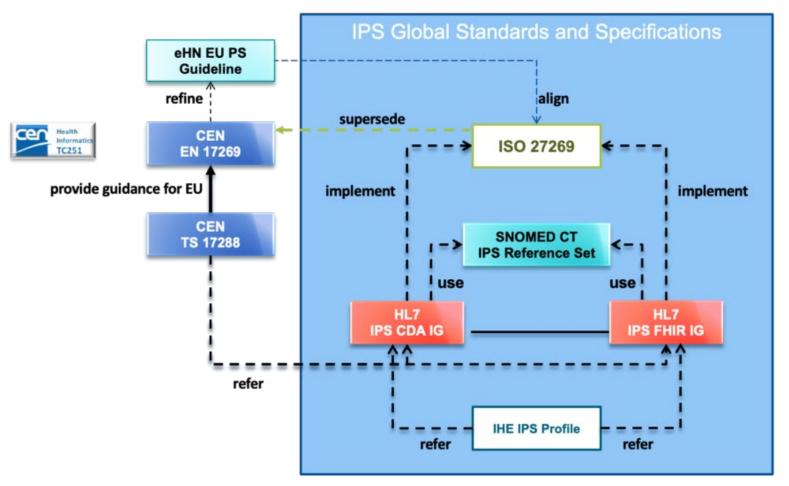

FHIR Documents

- A "FHIR Document" instance is a Bundle of type document that starts with a Composition and contains specific frozen versions of other resources
- The IPS uses the Composition to organize its sections (different clinical domains) and summarize a textual representation of the document
- FHIR Documents enable both a human readable view (even systems don't know FHIR) as well as machine consumption

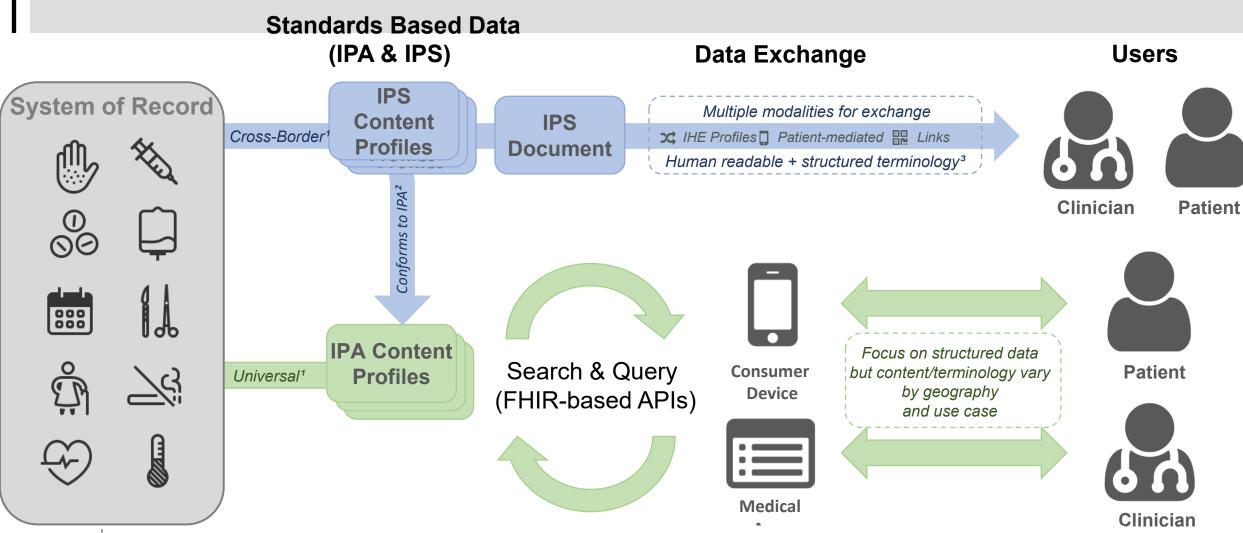

Cross-SDO Collaboration

IPS vs. IPA

HL7
International

 [&]quot;Cross-Border" has an international focus but may be any organizational, regional, or national jurisdiction. "Universal" includes data access within and across borders as a baseline for international commerce.
 Pending final ballot reconciliation of IPA and updates to IPS
 IPS primarily uses the SNOMED IPS Terminology where most appropriate

Patient Mediated IPS Exchange

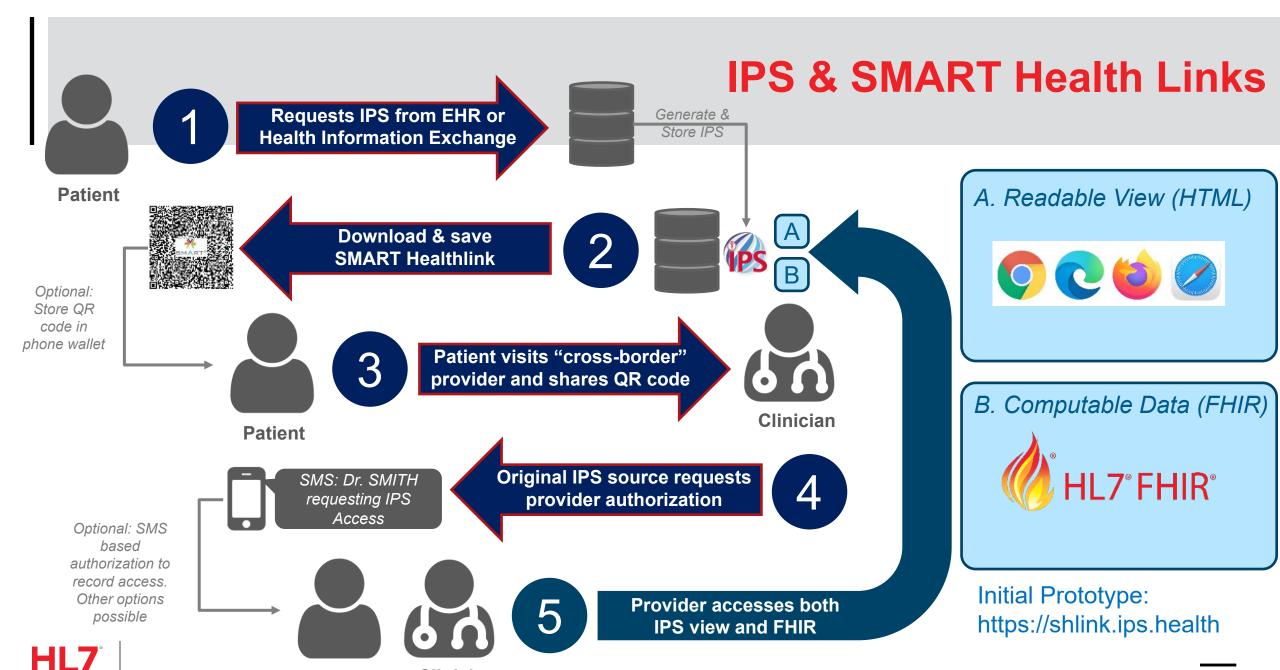

Patient requests and gets QR code to link to IPS

physician access request when they navigate QR code

Patient receives

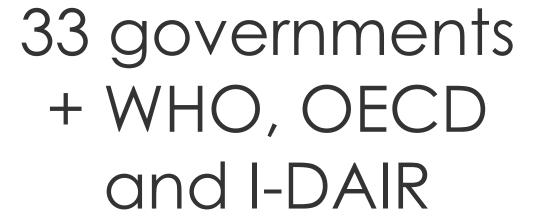

What is the Global Digital Health Partnership (GDHP)?

- Formed to support the effective implementation of digital health, exchange global best practices, and advance mutually beneficial projects. The GDHP provides opportunities for worldwide participants to exchange best practices for data sharing, electronic health records, ePrescribing, patient access, etc.
- 5 Workstreams related to work. One is interoperability which has a focus on the International Patient Summary. More info at link below

https://gdhp.health

What is the Global Digital Health Partnership (GDHP)?

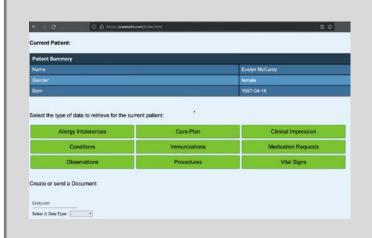

GDHP & IPS Around the Globe

Canada

National adaptation of IPS to regional information exchange Project-a-thon with exchange testing, content creation and vendor demo (March 2022)

Netherlands

Significant work to advance IPS adoption domestically through secure exchange MedMij

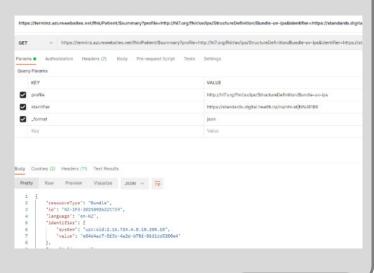

Host of 2022 GDHP Summit

Multiple commercial vendors participating in connectathons and IPS development

IPS involvement in multiple Trans-Tasman Connectathons

Public server for IPS testing:

https://terminz.azurewebsites.net/fhir

Notable IPS Upcoming Events

Connectathon Track

Connectathon & WGM+ May 6-12 New Orleans, US

Wednesday WGM+ (Q4)

DevDays 2023 June 6-9 Amsterdam, NL

HIMSS Europe 2023 June 7-9 Lisbon, PT

Mini-Connectathon June 20 & 11th GDHP Summit June 21-23 Washington, DC, US

Medinfo23 July 8-12 Sydney, AU
